Modernization of sewage collector in Lutsk

Modernization of 1,994.6 m of the pressure sewer collector (from 1A Karpenko-Karoho Street to the intersection of Heroiv UPA Street and Lypovetska Street), including the replacement of two sewage lines with a total length of 1,994.6 m:

replacement of 1 528,2 m of pipes with an open method: dismantling of old pipes, laying out 10 cm sand foundation, installation of new polyethylene pipes;

replacement of 466,4 m of pipes with sanation method in places where pipes go under the highway and railway: cleaning old pipes of corrosion deposits, placing the new polyethylene pipes into the cleaned old ones. This sanation method allows not to ruin the road and railway;

installation of 6 cameras in modernized pipes.

Activities for Lutsk

Purchase of mobile sewerage supporting equipment

The equipment will make it possible to observe and diagnose the processes taking place inside pipes, wells, using video camera, in order to provide a complete inspection of the sewage collector

software

a high-resolution video camera that transmits images to the specialist's monitor

equipped automobile
